Modern medicine runs on technology and someone has to keep that technology in top working order. Graduates of Collin College’s Biomedical Equipment Technology program have the training and experience to ensure lifesaving medical technology is in top working order. This career is perfect for people with an interest in the growing health care field but who do not want to work with patients. Top employers include hospitals, medical offices, and large clinics which provide tests for patients.

About Collin College’s Program
The Biomedical Equipment Technology degree program at Collin College provides entry-level employment training for students interested in careers in the biomedical equipment industry. The program includes 15 hours of general education courses and 45 hours of courses directly applicable to Biomedical Equipment Technology.
