Patient Care Technician (PCT)
Practical skills training for those seeking entry-level employment in a hospital setting.

Did you know... PCTs are in high-demand, and get to work alongside the treating doctor and nurse providing direct care to hospital patients.

PCT Program Information:

- The PCT program is generally completed over three semesters.
- Students interested in the PCT certification pathway will need to complete their CNA and Phlebotomy certification programs along with the selected EKG course to be eligible to enroll in the PCT program courses.
- PCT courses are only offered at the Technical Campus in Allen in the fall and spring on Monday and Wednesday evenings.

NOTE: Please be aware that students are required to provide their own transportation to and from clinical rotation sites.

What will I learn?

Certified Nurse Aide Training (CNA):
- Knowledge, skills and abilities essential to provide basic care to residents of long-term care facilities.
- Resident’s rights, communication, safety, observation, reporting and assisting residents in maintaining basic comfort and safety.
- A work-based learning experience that enables the student to apply specialized occupational theory, skills and concepts.

EKG Technician Training:
- Cardiac testing including the techniques and interpretation of patient physical assessment.
- Electrocardiography, stress testing, Holter monitoring, vital signs, and cardiovascular pharmacology.
- Basic electrocardiography and echocardiography procedures, interpretation of basic dysrhythmias, and appropriate treatment.

Phlebotomy Technician Training:
- Proper techniques/standard precautions for blood collection.
- Skill development in vacuum collection devices, syringes, capillary skin puncture, butterfly needles, blood culture, and specimen collection on adults, children, and infants.

Patient Care Technician Training:
- Training, skills, and knowledge needed to gain employment as a Patient Care Technician in a hospital setting.

Where can I work and how much will I make?

PCTs work primarily in hospitals, and can be utilized in a wide variety of settings -- from the emergency room to pediatric care.
