

Required Immunizations:

All immunizations must be completed PRIOR to beginning clinicals in the nursing program. Students conditionally accepted must be able to complete all required immunizations by the start of the semester admitted or will forfeit their positions in the program.

- Measles, Mumps & Rubella (MMR) – **Blood titer ONLY** (You must provide actual lab that illustrates positive immunity)
- Tetanus-Diphtheria (Tdap) - Tetanus-Diphtheria-Pertussis (within last ten years); NOTE: This is NOT Td or DTap.
- Hepatitis B series – **Blood titer ONLY** (You must provide actual lab that illustrates positive immunity)
- Varicella – **Blood titer ONLY** (Serologic confirmation of immunity is accepted)
- Tuberculosis Screening - You are **required** to submit an Intradermal PPD (Mantoux) or Quanteferon blood test every 12 months, unless previously positive. PPD documentation must include date placed, date read, and mm induration (even if it is 0mm). If positive, a Chest X-ray is required every 5 years. You **must** provide documentation of your previous positive PPD or Quanteferon results as a clear chest X-ray alone is not acceptable.
- Flu Vaccination – Required during flu season – usually September to April

If titers come back negative, you must show proof of previous immunizations and repeat that immunization series.
