Cyberwar

“Great power competition—not terrorism—is now the primary focus of U.S. National Security,” Secretary of Defense Mattis said in early 2018. America’s “competitive edge has eroded in every domain of warfare,” including the newest one, “cyberspace.” The nuclear strategy gave voice to a growing fear among many in the Pentagon that cyberattacks posed a threat unlike any other, and one we had completely failed to deter.

This three part study will look at cyberwar now ongoing and with a potential to become physically devastating, but largely not understood by the American people. The study will be a review of the book, “The Perfect Weapon” by David Sanger.

What Is The Cloud and How Does It Work?
